Control Profiles

Use the menu item *Control Profiles* to link time models to devices to determine when access through the respective door should be possible.

List of control profiles

The list contains the control profiles that have already been created. You have the following options here:

- **Changing a control profile:** Select a different time profile for the desired device and press *Save*.
- **Adding a control profile:**
  - Press *Add*. An empty entry will appear at the end of the list.
  - Select a device in the *Device* column
  - Select the desired time model in the *Time Model* column.
  - Press *Save*.
- **Removing a control profile:** Press the trash icon to remove a profile. A confirmation dialog will appear.

When a control profile has been created for a device, the doors associated with it will remain open during the time period specified in the assigned time model.

> It is possible to create multiple control profiles for a device.

TIPS

Control profiles can also only be effective for a certain period of time. Use the *Valid from* and *Valid to* columns for this purpose.
