

Sites

The menu item *Sites* allows you to manage various sites within JaniWeb.

List of sites

The list contains all sites that have already been created. Select an entry to view details.

Button *New*

Press *New* to create a new site. Enter a *Description*, a *Country* and a *Location*, and press *Save*.

To delete a site, use the trash icon for the corresponding entry.

TIPS

Sites are useful, for example, for creating different configurations for the displayed fields in the menu items *Persons* or *Visitors*. In addition, different configurations for visitor self-registration can be defined using sites.

You can use the permissions for the different sites in the *Roles* menu to define which visits are visible in the *Visits* menu. Only the visits for the site for which the respective user has permission are displayed.
